[illegible]

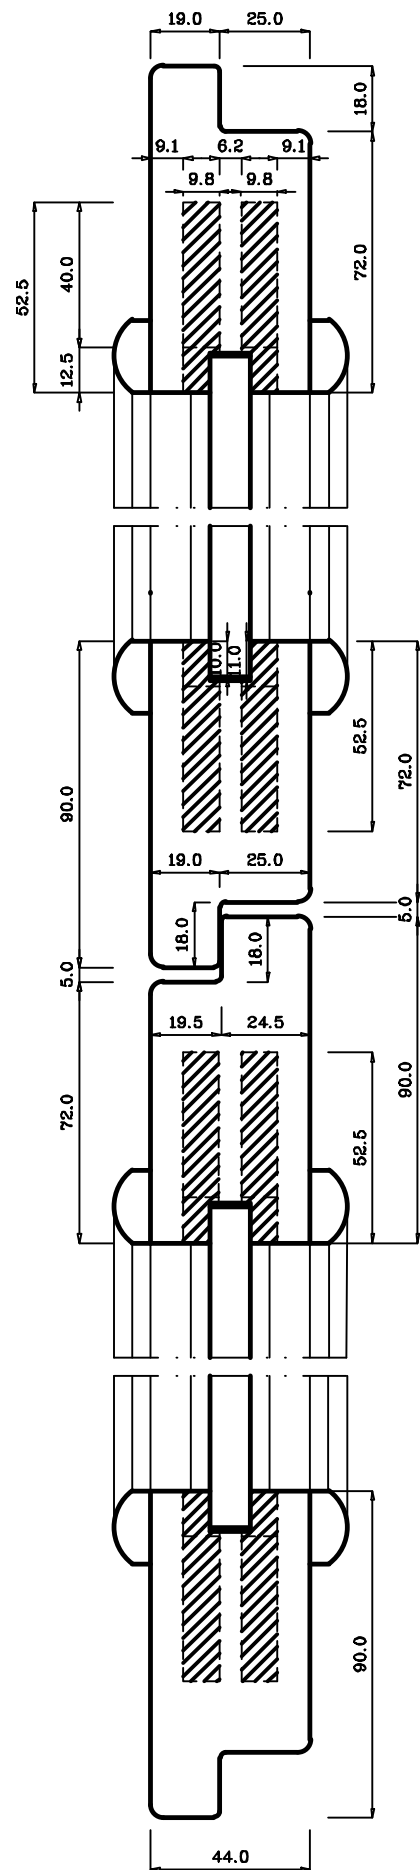

This technical drawing illustrates a window blind assembly in a closed position. The assembly consists of a series of horizontal slats held together by a side rail mechanism. The slats are shown in a closed, horizontal orientation. The side rail mechanism is depicted on the right side of the drawing, showing the internal components that allow the slats to be raised and lowered. The drawing is a perspective view, showing the top and side of the assembly. The slats are represented by parallel lines, and the side rail mechanism is shown with a series of curved, interlocking components. The entire assembly is mounted on a vertical support structure, which is shown as a simple rectangular frame on the left side of the drawing.
